Abstract

FinGen is an LLM based web application that analyses a User's Transaction history, current financial status, Salary and Possibilities of Hike to reveal the user's spending behaviour, visualization of Expenditure and customized advice on how to achieve a particular financial goal

Market Analysis

The Market for Personal Finance management is very huge and we can create a product that will exactly tune in with our customer base because

- Huge Demand
The demand for a personalized finance assistant is huge
- Incompetence of existing solutions
Existing Solutions don't provide personal insights on expenditure
- Artificial Intelligence
Customers are much welcoming for AI Solutions in their products
- LLM
LLMs dedicated to Finance are not readily available in the market

Consumer Viability

Customers will find good value proposition in our product. This is because of factors in our product like.

Personalized Insights

Personalized insights are given for their expenditure with consideration of their financial status

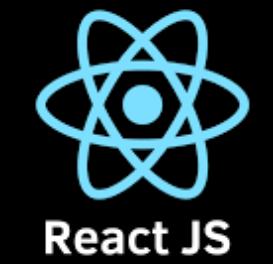

User Interface

The web application is created with the user simplicity and aesthetics in mind

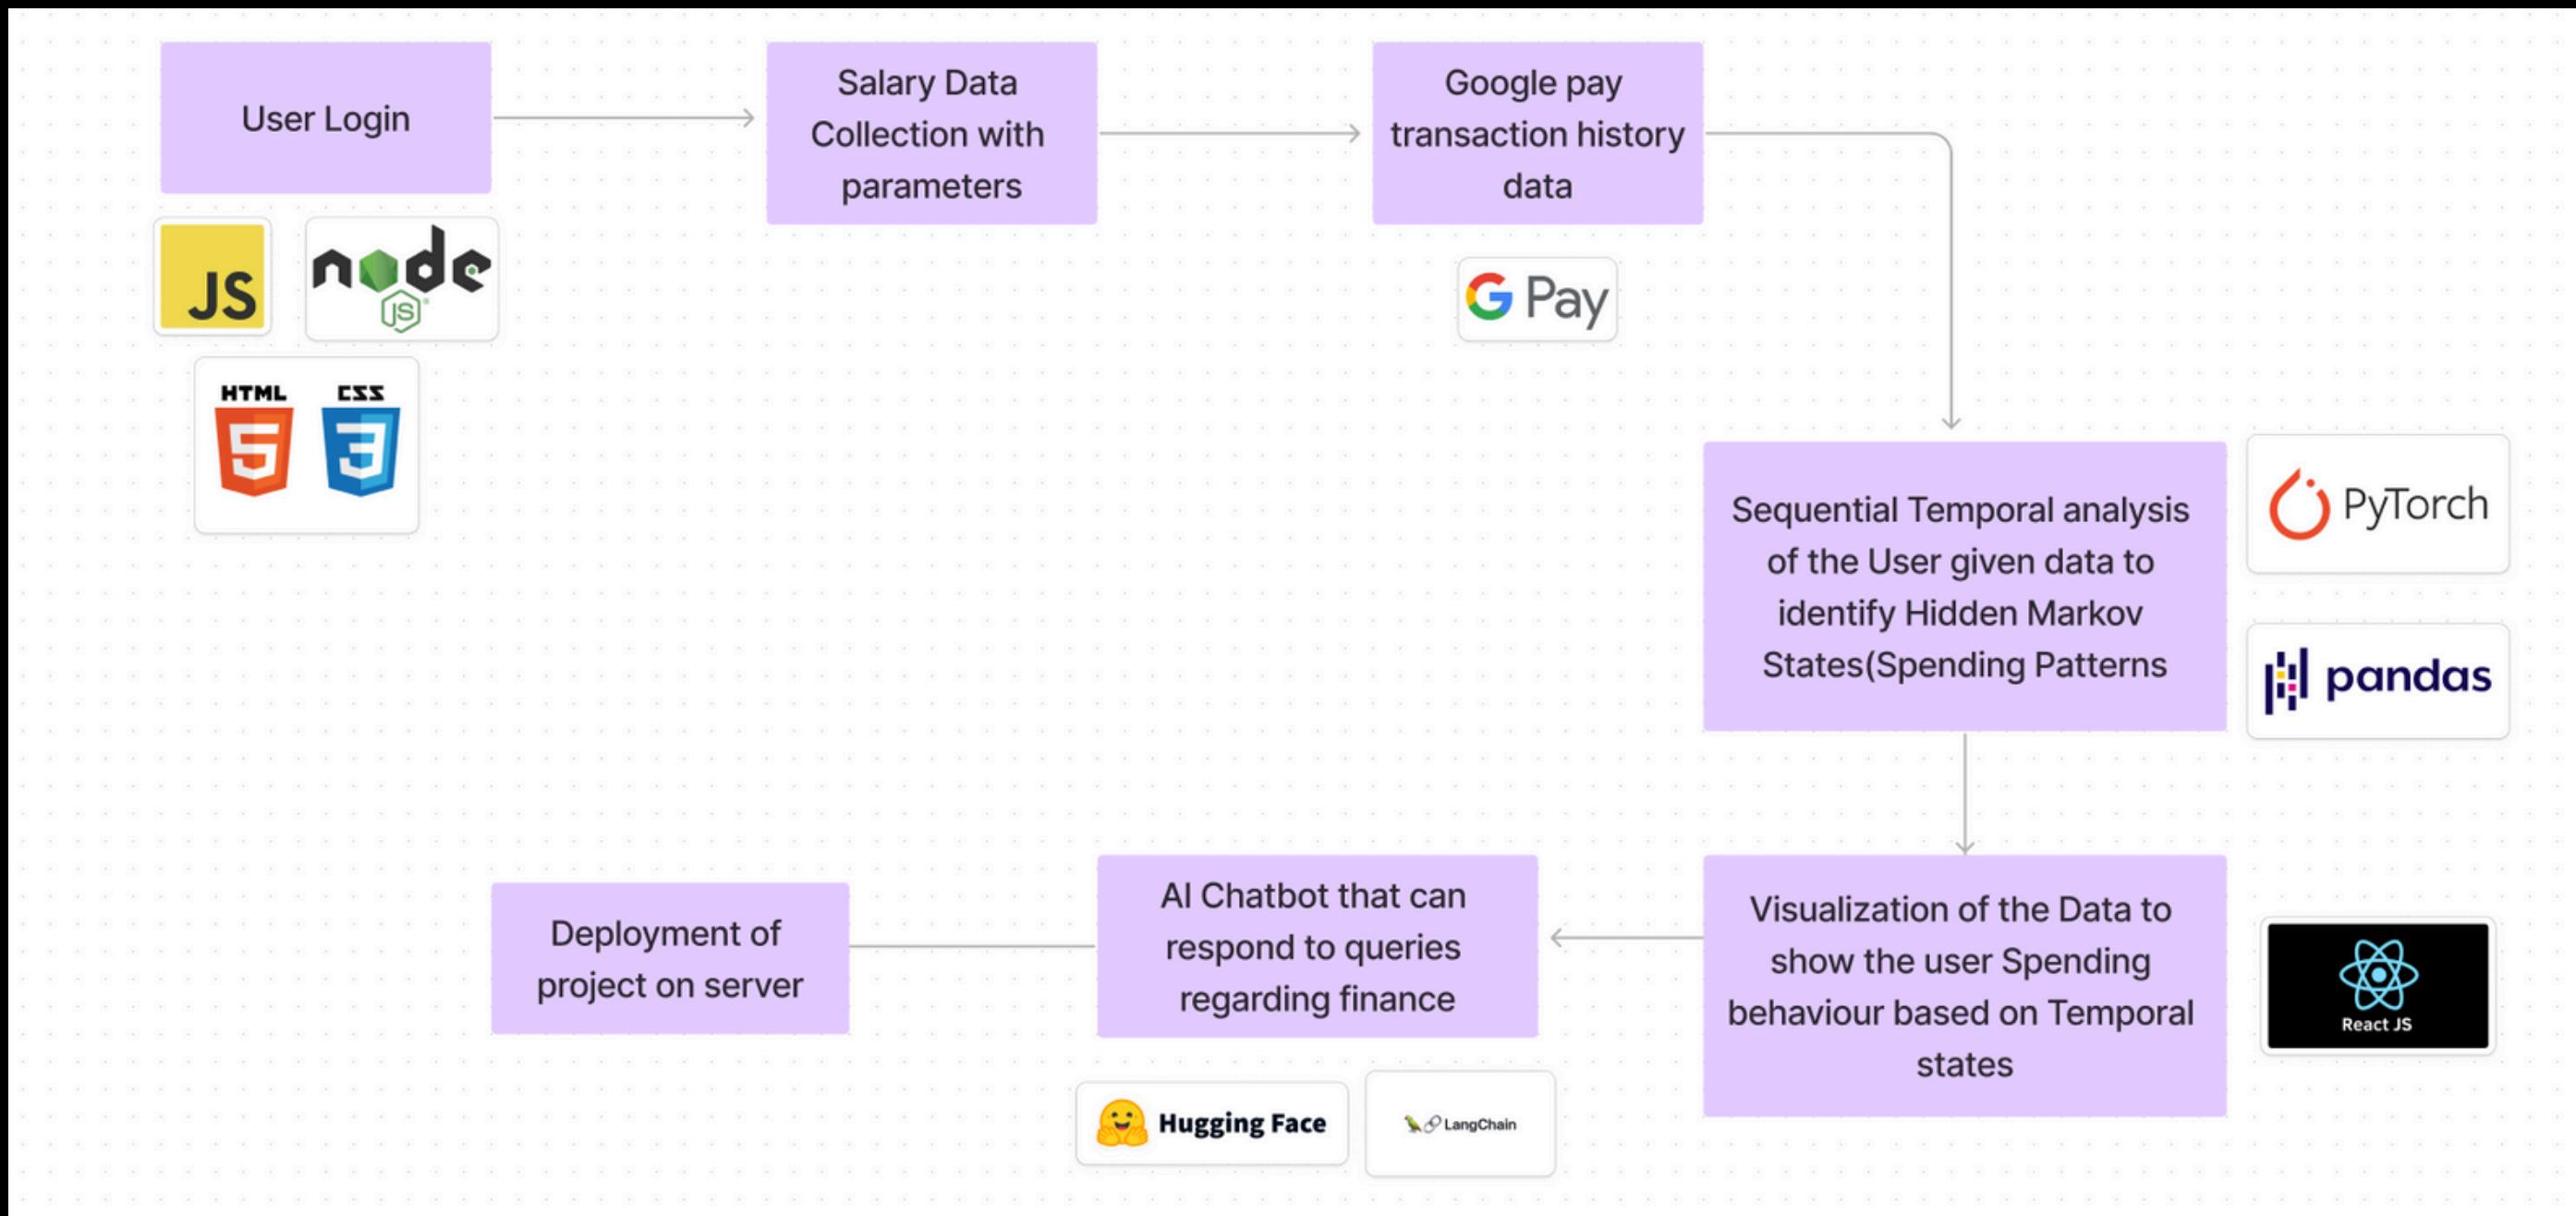

Financial Chatbot

An AI chatbot powered by Meta Llama 2 will be available for the customers 24/7
